THE IDEA

With the objective to improve the effectiveness of IFLA EUROPE at scaling up the efforts for promoting and championing for quality and excellence in profession, ensuring the high standards in profession and education, enhancing the collaboration with other organisations and agencies, the Member's Database would be an archive of Landscape Architects' expertise.

The Initial idea of Members Database dates from IFLA Europe General Assembly in Oslo, Norway in 2014. IFLA Europe Executive Council, with full support of the General Assembly, agreed the need for a more cohesive IFLA Europe that is able to provide its National Associations and their members opportunities to develop their capacities at European level.

THE AIM

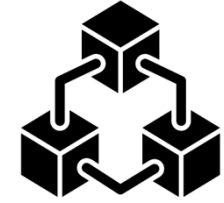

Members' Database aims to:

1. Establish a completely new working and networking approach inside IFLA Europe, without interfering with the professional databases existing in each country, nor with the relations between members and their National Associations.
2. Work transversally with other projects currently developed in IFLA Europe which strives to strengthen its services to the Member Associations.
3. Be a source of different expertise offered by IFLA Europe and its Member Associations so that we can better respond to requests we receive from European Commission, Council of Europe or other organisations seeking professional advice or expertise in various fields.

STRUCTURE

Members' Database is split in three parts:

The first part consists of general questions of personal communication data, membership, educational qualifications and professional status.

The second part is about the areas of knowledge and expertise, as well as networking activities in European, International Organisations and participation in working group activities of IFLA EUROPE.

In the third part, members are asked to respond to Professional Mobility issues, which do not allow them to practice landscape architecture profession in another country.

OF LANDSCAPE ARCHITECTS

All data will be stored and remain confidential, without being visible to third parties or to other members. Experts per country or per field will be used by IFLA Europe and can be shared with others upon specific requests, as well as to serve to any statistics that might be derived.

Thank you

Katerina Gkoltsiou, IFLA EUROPE President
